SUMMARY

Computer Science graduate with internship experience in Data Engineering and hands-on expertise in backend development, computer vision, blockchain, and workflow automation. Skilled in building scalable Django applications, PostgreSQL databases, and AI-powered systems, seeking an Associate Software Engineer or Backend Engineer role.

EDUCATION

Information Technology University
Bachelor of Science in Computer Science
Punjab Group of College
FSC Pre-Engineering

Lahore, Punjab
Aug 2022 – July 2026
Lahore, Punjab
October 2020 – June 2022

EXPERIENCE

Data Engineer Intern(onsite)

June 2025 – August 2025

Axiom World

- Automated data collection workflows using n8n and Selenium, reducing manual processing across multiple datasets.
- Designed ETL pipelines and managed structured datasets across raw, silver, gold, and production layers.
- Integrated machine learning outputs with Django-based backend services through APIs for real-time data availability.
- Optimized backend APIs and PostgreSQL operations to improve application performance and data flow.

PROJECTS

Face Recognition System for Low-Resource Devices.

A Comparative Analysis of State-of-the-Art Face Recognition Models

Python, Django, OpenCV, InsightFace, ArcFace, RetinaFace, ONNX Runtime, PostgreSQL

- Evaluated five state-of-the-art face recognition models on the SCFace dataset, selecting ArcFace for its accuracy and CPU efficiency.
- Built a desktop and web-based attendance system using RetinaFace, ArcFace embeddings, cosine similarity, and ONNX Runtime for low-resource inference.
- Integrated PostgreSQL, email/NTFY alerts, and DroidCam-based live monitoring to automate attendance and unknown-face reporting.

Blockchain-Based Donation System with AML Monitoring

Django, Solidity, Ethereum, Web3.py, Hardhat, MetaMask

- Built a blockchain-powered donation platform with Solidity smart contracts for transparent, immutable Ethereum transactions.
- Connected Django backend to Ethereum via Web3.py and MetaMask for wallet-based authentication and on-chain data processing.
- Designed an AML monitoring module for admins to track, review, and flag suspicious blockchain transactions.

C++ Compiler From Scratch | C++

- Built a toy compiler with lexical analysis and a recursive-descent parser for syntax and semantic checks.
- Handled error detection for a custom grammar specification, exploring core compiler pipeline design.

Speech Transcriber & Translator | Python, OpenAI Whisper, Google Translate API, Tkinter

- Built a desktop app for live/uploaded audio transcription using OpenAI Whisper and multilingual translation via Google Translate API.

Airbnb Clone | MERN Stack

- Built a full-stack Airbnb-inspired web app with React, Node.js, and MongoDB, featuring JWT authentication and role-based booking/listing management.

College Management System | Csharp, ASP.NET, MySQL, HTML, CSS, Bootstrap

- Developed a full-stack .NET web app with a MySQL database and role-based access for Admins and Instructors.

TECHNICAL SKILLS

Programming Languages: C/C++, Python, C#, JavaScript, HTML/CSS, XML

Frameworks: .NET, React.js, Node.js, Django

Databases: MongoDB, MySQL, PostgreSQL, NocoDB

Libraries: OpenCV, InsightFace, Pandas, NumPy, Matplotlib, PyTorch, Tkinter, SFML, Selenium

Tools & Environments: Git, VS Code, Visual Studio Community, Docker, Jupyter, Linux, n8n
